                                                                                  CC The present invention specifically describes mammalian Esel and 2 CC proteins (I) and their splice variants (Ese = EH-domain and SH3-domain CC regulator of endocytosis). (I) are involved in regulation of clathrin-CC mediated endocytosis (as a complex with Esp15 protein) vesicular CC trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists, CC mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab); CC sequences antisense to the (I) polynucleotide; agents that downregulate CC expression of Ese genes or antagonists of an Ese binding partner are CC used to treat diseases associated with undesirable endocytosis and CC resulting changes in cellular function. Particularly overexpression of CC Esel is used to block clathrin-mediated endocytosis in vivo or in cell CC cultures, while administration of (I) is used to promote endocytosis of CC selected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal CC proliferation of cells that can be stimulated to proliferate by a growth CC cused to prevent viral infection. Endocytosis may also be regulated, in CC vivo or in cell cultures, by forming an Ese-Esp15 complex, then binding CC dynamin to the complex. Generally conditions that can be treated include cancer; abnormal cell division or migration; viral infection; or abnormal CC receptor signalling, tissue development or synaptic transmission. The present sequence represents mouse Esell CDNA sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5
  The present sequence encodes mouse Esel. The present invention specifically describes mammalian Esel and 2 proteins (I) and their splice variants (Ese = EH-domain and SH3-domain regulator of endocytosis). (I) are involved in regulation of clathrin-mediated endocytosis (as a complex with Espl5 protein), vesicular trafficking and actin cytoskeleton.
                                                                                                                                                             Claim
                                                                                                                                                                                                                                 New nucleic acid encoding of endocytosis, used e.g.

```
CC generally (I) (or its (ant)agonists, mimetics, fragments and inactive cm thants); (I)-specific antibodies (Ab); sequences antisense to the (I) CC polynucleotide; agents that downregulate expression of Ese genes or ct antagonists of an Ese binding partner are used to treat diseases cC associated with undesirable endocytosis and resulting changes in cellular cC function. Particularly overexpression of Esel is used to block cC clathrin-mediated endocytosis in vivo or in cell cultures, while cC administration of (I) is used to promote endocytosis of selected cells. CC (Ant)agonists of (I) or Ab are used to suppress abnormal proliferation of CC cells that can be stimulated to proliferate by a growth factor receptor; CC and similar compounds (also inactive Ese mutants) can be used to prevent cultures, by forming an Ese-Espl5 complex, then binding dynamin to the CC complex. Generally conditions that can be treated include cancer; CC abnormal cell division or migration; viral infection; or abnormal cC receptor signalling, tissue development or synaptic transmission.

CC involving the megakaryocytic lineage. The SH3DIA gene maps to the CS sequencing of 5 different sizes of CDNA clone from foetal brain CC (see AAZ34570-74) suggests that at least 3 isoforms exist. The CC invention provides methods for the diagnosis and treatment of CC megakaryocytic abnormality, myeloproliferative disorder, platelet disorder on chromosome 21. The CC megakaryocytic abnormality, myeloproliferative disorder, platelet conclusions and disorders, thromosocytopenia, CC platelet disorder on chromosome 21 low platelets in deletion for CC platelet disorder on chromosome 21 with leukaemias, neural conceptally, association of gains in chromosome 21 with leukaemias, neural conceptally, lissenceptally, and disorders including brain conceptally, lissenceptally, and colpoceptally. Methods are also CC microcephaly, lissenceptally, and colpoceptally. Methods are also CC provided for: suppressing cells unable to regulate thromour risk corresponded for a somatic alteration in the SH3DIA gene; monitoring CC microcepts or megakaryocytic abnormality, myeloproliferative disorder, consequence, platelet disorder or leukaemia; and colpocepts or megakaryocytic abnormality, myeloproliferative disorder, consequence, consequence, leukaemia or neural disorder using a concleic acid that expresses SH3DIA or its antisense nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This is the nucleotide sequence of full-length cDNA (clone 11) corresponding to a novel human SH3 gene, termed the SH3DLA gene, that contributes to the development of platelets and the pathogenesis of leukaemias, both in general and in particular those involving the megakaryocytic lineage. The SH3DLA gene maps to the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
CC pathogenesis of leukaemias, both in general and in particular those convolving the megakaryocytic lineage. The SH3DIA gene maps to the CC involving the megakaryocytic lineage. The SH3DIA gene maps to the CC sequencing of 5 different sizes of CDNA clone from foetal brain CC (see AAZ34570-74) suggests that at least 3 isoforms exist. The CC invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet clisorder, acute leukaemia, neural disorders, thromobocytopenia, cC platelet disorder on chromosome 21, low platelets in deletion for C21, association of gains in chromosome 21 with leukaemias, neural CC abnormalities, dysfunctions and disorders including brain CC malformations and corresponding cognitive dysfunctions. CC microcephaly, lissencephaly, and colpocephaly. Methods are also CC provided for: suppressing cells unable to regulate themselves; CC progress or megakaryoctyic abnormality, myeloproliferative disorder, CC haematopoietic disorder, platelet disorder or leukaemia; and cc reatment of a subject (including a prenatal subject) having megakaryocytic abnormality, myeloproliferative disorder, platelet disorder using a collatelet disorder, leukaemia or neural disorder using a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SH3D1A gene; human; Down's syndrome; leukaemia; cancer; megakaryocytic abnormality; myeloproliferative disorder; platelet disorder; neural disorder; thromobocytopenia; haematopoletic disorder; cognitive dysfunction; microcephaly; lissencephaly; colpocephaly; holoprosencephaly; diagnosis; therapy;

The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC trestore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC diagnostic coding sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed cc at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                        dysfunctions and disorders including brain malformations and corresponding cognitive dysfunctions, microcephaly, lissenceph and colpocephaly. Methods are also provided for: suppressing cells unable to regulate themselves; screening for a somatic alteration in the SH3DIA gene; monitoring the progress and adequacy of a treatment; monitoring tumour risk progress or megakaryoctyic abnormality, myeloproliferative disorder, haematopoietic disorder, platelet disorder or leukaemia; and treatment of a subject (including a prenatal subject) having megakaryoctyic abnormality, myeloproliferative disorder, platelet disorder using a platelet disorder, leukaemia or neural disorder using a possible of the control of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              at least 3 isoforms exist. The invention provides methods for t diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, acute leukaemia, neural disorders, thromobocytopenia, platelet disorder on chromosome 21; low platelets in deletion for 21, association of gains in chromosome 21 with leukaemias, neural abnormalities,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  candidate region for low platelets on chromosome 21. Sequencing of 5 different sizes of cDNA clone (see AAZ34570-74) suggests that at least 3 isoforms exist. The invention provides methods for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           to the development of platelets and the pathogenesis of both in general and in particular those involving the megakaryocytic lineage. The SH3DIA gene maps to the sma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        platelet disorder; neural disorder; thromobocytopenia;
haematopoietic disorder; cognitive dysfunction; microcephaly;

The invention describes an isolated nucleic acid molecule (I) encoding a covel central nervous system protein. (I) and polypeptides (III) encoded (I) y(I), are used to treat a medical conditions and in diagnosis of a gathological condition. Disorders which are diagnosed or treated include (I) antological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative (I) disorders e.g. neoplasms of the breast or liver, cardiovascular disorders (I) cardiac arrest, cerebrovascular disorders e.g. cardiovascular disorders (I) anylotrophic lateral sclerosis, infections caused by bacteria, viruses (I) anylotrophic lateral sclerosis, infections caused by bacteria, viruses (I) acquired immunodeficiency virus (AIDS) and fungi, ocular disorders (I) adenocarcinomas and irritable bowel syndrome, reproductive system (I) adenocarcinomas and irritable bowel syndrome, reproductive system (I) disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes (I) and pituitary dwarfism, cancers and disorders at the cellular level e.g. (I) respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. cacute kidney failure and blood related disorders e.g. myocardial (I) infarction. The polypeptides can also be used to aid wound healing and (I) infarction. The polypeptides can also be used to aid wound healing and (I) contrease or decrease storage capabilities, fat content, lipid, protein, to correase or decrease storage capabilities, fat content, lipid, protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17-NOV-2000

```
CC The invention relates to human polynucleotides (AAI63803-AAI64012) and CC the encoded proteins (AAM434497-AAM43660) useful for preventing, treating CC or ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the CC specification. The nucleic acids, proteins, antibodies and (ant)agonists CC are useful in the diagnosis, treatment and prevention of: (a) cancer, CC e.g. breast and ovarian cancer and other cancers of the adramal gland, CC companital, (b) immune disorders e.g. Addison's disease, allergies, CC autoimmune hammolytic anaemia, autoimmune thyroiditis, diabetes mellitus, CC crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative CC colitis, (c) cardiovascular disorders such as myocardial ischaemias, CC (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and CC epilepsy; and (f) infectious diseases such as viral, bacterial, fungal CC core. The semence data for this natural did not form part of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

CC This is the nucleotide sequence of a cDNA clone, termed clone 5, CC corresponding to a novel human SH3 gene, termed the SH3DIA gene, CC that contributes to the development of platelets and the SH3DIA gene, CC involving the megakaryocytic lineage. The SH3DIA gene maps to the CC involving the megakaryocytic lineage. The SH3DIA gene maps to the CC sequencing of 5 different sizes of cDNA clone from footal brain CC (see AAZ34570-74) suggests that at least 3 isoforms exist. The CC invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet CC invention concerns and corresponding on thromosome 21.

CC platelet disorder on chromosome 21 low platelets in deletion for CC 21, association of gains in chromosome 21 with leukaemias, neural CC abnormalities, dysfunctions and disorders including brain CC microcephaly, lissencephaly, and colpocephaly. Methods are also CC provided for: suppressing cells unable to regulate themselves; CC microcephaly, lissencephaly, and colpocephaly, methods are also CC progress or megakaryoctyic abnormality, myeloproliferative disorder, chaematopoietic disorder, platelet disorder or leukaemia; and CC treatment of a subject (including a prenatal subject) having CC megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, chaematopoietic acid that expresses SH3DIA or its antisense nucleic acid. CC nucleic acid that expresses SH3DIA or its antisense nucleic acid.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            nge
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               á
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostice as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical inaging of sites expressing (II). (I) and (II) are useful for treating
                                                                                                                                                                                                                                                                                                                                                                           New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              31-MAR-2000;

AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from Will at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostice, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ftp.wipo.int/pub/published_pct_sequences.

CC sequence and an oligonucleotide comprising a sequence complementary to a coligonucleotide which comprises a 3'-end sequence complementary to a coligonucleotide which comprises a 3'-end sequence complementary to a coligonucleotide which comprises a 3'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in coliform the primer sets can be used in antisense therapy and coliform the primers are useful for synthesising polynucleotides, coliform and/or diagnosis of the primers are also useful for the collection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification cc of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
